Dr. Gruber holds a BA and a MD from the University of Pennsylvania. After 9 years at UCSD as a geneticist, rheumatologist and researcher, Dr. Gruber began a career in industry by founding Gensia, Inc. in 1986, one of the earliest gene therapy firms which went public in 1990 and had a market cap of $1.7 billion. Dr. Gruber founded web-based solutions companies Intervu (sold for 2.8 billion... yes, with a "b") and Kintera (helping non-profits raise money and awareness) in the 90s, and now runs Tocagen, a company dedicated to the development and commercialization of breakthrough treatments for cancer using advanced gene transfer technologies. We are excited to hear about Dr. Gruber's extensive experiences in industry for March's PSC Career Perspectives talk! We hope to see you there!

We welcome all interested faculty, medical students, MSTP students, residents/fellows, and others to attend a stimulating talk from Harry Gruber, MD, about his experiences as a physician scientist.

Please RSVP to neamin@ucsd.edu. Walk-ins welcome.
